

Dealing with Data Securely: Non-technical Thoughts Concerning Data Security and Management

John Baumann, PhD
Associate Vice President for Research Compliance
baumannj@iu.edu

Bethany Johnson, JD, CIP
University Director, Human Research Protection Program
bwinnie@iu.edu

1

Objectives

- ◆ Review and identify challenges and obstacles for data security and protection of confidentiality
- ◆ Identify best practices for IRBs in the review of researchers' plans for protection of data and confidentiality
- ◆ Identify strategies for institutions to work with researchers and IRBs to develop and implement data management/security strategies.

2

Introduction

- ◆ When I started in the field.....
 - ◆ Locked filing cabinet in a locked office
- ◆ Now.....
 - ◆ Not so much, to say the least
 - ◆ It's a new world for Data

3

Introduction

- ◆ New Environment for Data
 - ◆ More data and more private data
 - ◆ New expectations and requirements to share data
 - ◆ New technologies to:
 - ◆ Collect
 - ◆ Use/Analyze
 - ◆ Share
 - ◆ Store
 - ◆ Hack/steal/lose data
- ◆ So a double/triple dose of
 - ◆ Opportunities
 - ◆ Risks/vulnerabilities

4

Introduction

- ◆ So..... What is
 - ◆ An IRB to do to be prepared?
 - ◆ A HRPP to do to be prepared?
 - ◆ An Institution to do to be prepared?
- ◆ Think in terms of
 - ◆ Expertise
 - ◆ Technology
 - ◆ Requirements

5

What is to be Done? Avoid This

6

What is to be Done?

- ◆ Option: Put IT experts on the IRB
 - ◆ Kinda a waste of expertise
 - ◆ Not practical
 - ◆ Risk of being idiosyncratic rather than systematic
- ◆ Option: Institutionalize It

7

What is to be Done?

- ◆ From Institutional Perspective: An Integrated Approach
 - ◆ Do we know what data we have?
 - ◆ As data is owned by institution – not researcher - need for institutional policies and process for collection, use, access, sharing and storing of this institutional data
 - ◆ IRB one component of institutional data oversight community
 - ◆ May well be central component for some activities, but not the only component
 - ◆ Who else and how to collaborate?
 - ◆ How do these units work together

8

Data Plan

- ◆ Pull Together all Interested/Affected Parties
 - ◆ IRB
 - ◆ Office and committee representatives
 - ◆ Researchers
 - ◆ IT
 - ◆ Security
 - ◆ Operations
 - ◆ Library
 - ◆ Privacy/HIPAA/GC
 - ◆ Institutional partners: For Whom IU Serves as IRB of Record
 - ◆ Hospitals
 - ◆ Partnering research institutes

9

Data Plan

- ◆ Begin the Conversation
 - ◆ Or, it may seem, negotiations/arguments
- ◆ Acceptable Systems Initially
 - ◆ Absolutely no overlap for collecting, transmitting, computing, storing, archiving
 - ◆ Thus the negotiation/argument part
- ◆ In the face of this
 - ◆ Narrowed the group
 - ◆ Drafted white paper
 - ◆ Re-gathered the group
 - ◆ Discussed, negotiated, cajoled, etc. till we reached a consensus

10

Data Plan

- ◆ Integrate Selected Systems into IRB Application
 - ◆ Accepted systems identified
 - ◆ Selection of any one of them means approvable
 - ◆ Use of any not identified
 - ◆ Required justification
 - ◆ Review by expert as consultant to IRB
 - ◆ Conduct education with IRB staff and members

11

From Concept to Reality

- ◆ Implementation
 - ◆ Negotiations continued
 - ◆ Application language
 - ◆ Reports
 - ◆ To whom
 - ◆ Including what information
 - ◆ Real-time or delayed
 - ◆ Institutional security signoff required prior to IRB approval?
 - ◆ Approval letter language
 - ◆ Education to research community
 - ◆ Research compliance staff not trained/equipped to provide

12

From Concept to Reality

- ◆ Phased Implementation
 - ◆ First step
 - ◆ Data subject to HIPAA
 - ◆ Highest compliance risk
 - ◆ Researchers dealing with this data already have some familiarity with security requirements
 - ◆ Collection of limited information
 - ◆ When using system on list
 - No further action required
 - ◆ When using system not on the list, researcher must either:
 - ◆ Confirm the system they are using has institutional IT security approval
 - ◆ Commit to completing institutional security review prior to use of system
 - ◆ Consider whether collection of detailed information may do more harm than good

13

Researcher Response

- ◆ Lots of Questions
 - ◆ Be ready with list of people who can assist – most likely not IRB or research compliance office
 - ◆ Departmental IT
 - ◆ Institutional IT
 - ◆ HIPAA Security Officer
 - ◆ Contracts
- ◆ But no resistance from researchers
- ◆ Helpful to know preferred systems
- ◆ Often speeds initiation of research by moving discussion regarding IT needs earlier in the process

14

Institutional Response

- ◆ Ready to move to Step 2
- ◆ But what is Step 2?
 - ◆ Non-PHI sensitive data
 - ◆ Back to negotiations with various stakeholders
 - ◆ But now we have data to guide decisions
 - ◆ Identify IT needs
 - ◆ Targeted education
 - ◆ Targeted communication

15

What We're Working on Now

- ◆ Data Management guidance
- ◆ Applying same process to research data not subject to HIPAA

16

Wrap Up

- ◆ Key Points in the Process
 - ◆ Identify the Goal
 - ◆ Identify and involve the best parties to be part of the process
 - ◆ Recognize that compromises have to be made, pet systems may be rejected, feelings may be hurt
 - ◆ Don't let the discussion/process wander too far off track
 - ◆ Keep pushing the agenda and goal
- ◆ Questions and Discussion
