1

Part I. Quality Payment Program Overview

2

2

CMS Quality Payment Program (QPP)

2019 is year 3 of the QPP

Two QPP tracks:

- The Merit-based Payment Incentive System (MIPS)
- Advanced Alternative Payment Models (APMs)

Impact:

- ≈800,000 clinicians in the MIPS
- ≈180,000 - 200,000 clinicians in Advanced APMs

3

MIPS Basics

Mandatory Program
for all eligible
clinicians

Clinicians and groups
received a score
between 0 and 100
points

Score determines
payment adjustments in
the corresponding
payment year

Medicare Part B
Payment adjustments
will reach: -9% to +9%

4

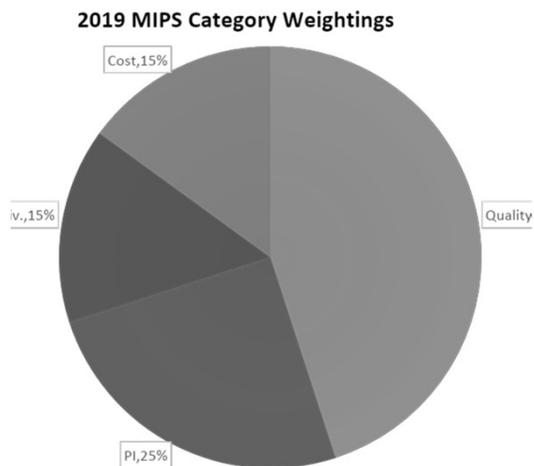

MIPS Scores Based on Performance in Four Categories

Quality	Up to 6 quality measures
Promoting Interoperability	Electronic health record (EHR) measures
Improvement Activities	Attest to meeting the requirements for 1-4 improvement activities
Cost	10 cost measures (2019 performance year)

5

Changes to MIPS Performance Category Weightings in 2019

Quality: 45%
 Promoting Interoperability: 25%
 Cost: 15%
 Improvement Activities: 15%

6

MIPS Eligible Clinician (EC) Types In 2019

2017-2018

Physicians
Physician assistants
Nurse practitioners
Clinical nurse specialists
Certified nurse anesthetists

ADDITIONAL EC TYPES IN 2019

Physical therapists
Occupation therapists
Qualified speech-language pathologists
Qualified audiologists
Clinical psychologists
Registered dietitians/nutrition professionals

APOLLO HIT, LLC WEBSITE: WWW.APOLLOHIT.COM EMAIL: INFO@APOLLOHIT.COM

7

7

Performance Thresholds in 2019

30 points for the 2019 performance year

- >30 points: positive adjustment
- =30 points: neutral adjustment
- <30 points: negative adjustment

Threshold values established by CMS for first 5 years of program

APOLLO HIT, LLC WEBSITE: WWW.APOLLOHIT.COM EMAIL: INFO@APOLLOHIT.COM

8

8

Exceptional Performance Payment

\$500,000,000 annual fund for exceptional MIPS performance

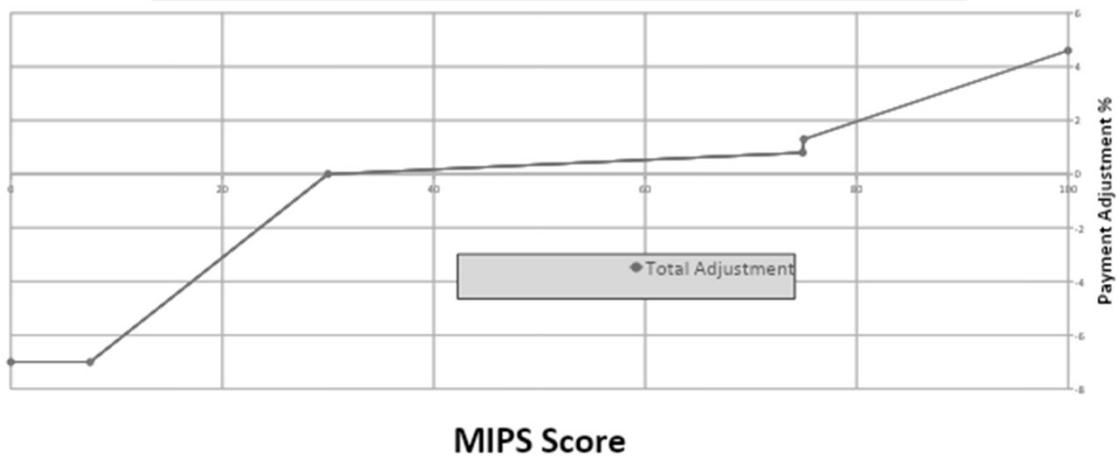

- Funded for the first 6 years of the QPP

Practices must achieve the “additional” payment threshold

- 75 points in 2019
- Maximum of 10% (additional payment adjustment)

9

Estimated MIPS Payment Adjustments in 2021 Based on 2019 Performance

10

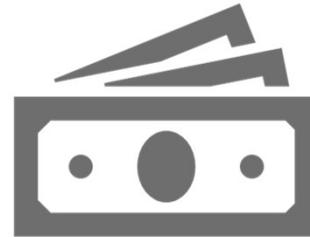

Maximum Positive Payment Adjustments

“3X” multiplier may be applied to positive payment adjustments

- Assumes adequate funds are available

Theoretical maximum positive payment adjustments per year:

- 31% for payment year 2021
- 37% for payment years 2022-2024
- 27% for payment years 2025 and beyond

11

Advanced Alternative Payment Models (APMs)

12

2019 Medicare Advanced APMs

- Bundled Payments for Care Improvement Advanced Model (BPCI Advanced)
- Comprehensive ESRD Care (CEC) - Two-Sided Risk
- Comprehensive Primary Care Plus (CPC+)
- Medicare Accountable Care Organization (ACO) Track 1+ Model
- Next Generation ACO Model
- Shared Savings Program - Track 2
- Shared Savings Program - Track 3
- Oncology Care Model (OCM) - Two-Sided Risk
- Comprehensive Care for Joint Replacement (CJR) Payment Model (Track 1- CEHRT)
- Vermont Medicare ACO Initiative (as part of the Vermont All-Payer ACO Model)

APOLLO HIT, LLC WEBSITE: WWW.APOLLOHIT.COM EMAIL: INFO@APOLLOHIT.COM

13

13

Advanced APM Basics

Qualifying Advanced
APM Participants
(QPs)

Based on
reaching
payment or
patient volume
thresholds

QPs:

Receive a 5%
lump sum bonus
Excluded from
the MIPS

Advanced APMs must have greater
than nominal shared risk

14

14

Section II. QPP: Fraud, Waste and Abuse Vulnerabilities

APOLLO HIT, LLC WEBSITE: WWW.APOLLOHIT.COM EMAIL: INFO@APOLLOHIT.COM

15

15

Quality Performance Reporting

Performance on clinical quality measures common to all QPP programs

Assess performance through ratios:

- E.g., the percentage of patients with a history of tobacco use that received cessation intervention

Quality measures have detailed specifications

- Include numerator and denominator criteria, and may include exceptions and exclusions, CPT/HCPCS codes, ICD-10-CM codes, medications

APOLLO HIT, LLC WEBSITE: WWW.APOLLOHIT.COM EMAIL: INFO@APOLLOHIT.COM

16

16

Quality Measure Benchmarks

Most quality measures have benchmarks

- Majority of benchmarks significantly elevated
- Creates pressure on clinicians/organizations to achieve “perfect scores”

MIPS Measure #134 “Screening for Depression and Follow-Up Plan”

Average	Decile_3	Decile_4	Decile_5	Decile_6	Decile_7	Decile_8	Decile_9	Decile_10
67.7	17.11 - 45.64	45.65 - 73.81	73.82 - 90.05	90.06 - 98.49	98.50 - 99.99	--	--	100

APOLLO HIT, LLC WEBSITE: WWW.APOLLOHIT.COM EMAIL: INFO@APOLLOHIT.COM

17

17

Quality Measure Reporting: Potential Compliance Challenges

False documentation “allowing” the clinician to:

- Achieve performance met or meet a requirement for an exception/exclusion

Retrospective actions that may result in noncompliance

- Quality data can be captured from clinical records retrospectively
- Alterations could be made to medical records to increase quality performance

Data aggregation from all sites of care – burdensome requirement

- Quality performance data
- Promoting interoperability performance data

APOLLO HIT, LLC WEBSITE: WWW.APOLLOHIT.COM EMAIL: INFO@APOLLOHIT.COM

18

18

Quality Measure Data Capture and Reporting (2)

Potential compliance challenges:

- EHR tools/templates
 - Default content that addresses measure
 - Ease of use settings for data capture
 - E.g., check a box stating an activity was performed (“Weight-loss counseling provided”)
- Manipulate quality data after export
 - Some third parties have encouraged “cherry-picking” of data to be submitted

Promoting Interoperability – Compliance Challenges (1)

E-Prescribing

- Failure to aggregate all prescriptions written during the performance period

Provide Patient Access Measure

- Measure is worth 40% of the score in the PI category
- Patients that refuse access:
 - Counted if provided with instructions
 - Potential for practices to add these patients to numerator without offering access
- Must meet the requirement that information is shared within patient within 4 business days

Promoting Interoperability – Compliance Challenges (2)

Sending Health Information Measure

- Measure requires that clinicians export and securely send an electronic Summary of Care Document for referrals or transitions of care

Specification document does not include some key guidance

- As per CMS QPP support team:
 - Receiving clinician must be using an EHR that can import an electronic version of the Summary of Care document
 - Sending the patient back to see a provider they have seen previously counts as a “referral”
 - Difficult for practices and auditors to interpret...

Promoting Interoperability – Compliance Challenges (3)

Receiving and Incorporating Health Information Measure

- Requires clinician to import and reconcile an electronic Summary of Care record for referred patients, patients undergoing a transition of care, and for patients “never previously encountered” by the clinician
 - “Never previously encountered” may be difficult for practices to track and to audit
 - E.g., patient seen in follow-up by PA shortly after being seen by MD
- Only encounters where the Summary of Care record has been “received” count towards the denominator
 - Difficult for providers to track and potentially for auditors to review
 - E.g., Summary of Care record sent via a secure third-party email application

Promoting Interoperability – Compliance Challenges (4)

Hardship Exceptions

- Practices may apply through attestation for a hardship exception
 - If approved PI category is reweighted to zero points
- Hardship exceptions available for:
 - Small groups that experience significant barriers to meeting the PI category requirements
 - Decertified EHR technology
 - Insufficient Internet connectivity
 - Extreme and uncontrollable circumstances, (e.g., natural disasters)
 - Lack of availability of Certified EHR Technology

Promoting Interoperability – Compliance Challenges (5)

Hardship Exception Vulnerabilities

- Attestation only
- Practice must provide documentation, but only if they are audited

Small practice exception does not specify that the practice needs to have faced significant barriers

- “On behalf of the clinician(s) listed in this application, I am requesting this hardship exception and attest that the clinician(s) was(were) participating in a small practice”

Clarification provided in Final Rule(s) and CMS PI FAQ document

- Practice must be facing substantial barriers to meeting PI requirements

Improvement Activity Compliance Challenges

MIPS Program only

Reporting is through attestation only

Potential Focus Areas of Audit

- False attestation that improvement activity requirements were completed
- Failure to have supporting documentation that activities were performed
- Failure to meet the specific requirements outlined in the improvement activity specification

25

Cost Category Performance

Risk adjustment common to all QPP models

- Models used similar to Medicare Advantage
- Hierarchical Condition Category (HCC) coding
 - Based on a subset of ICD-10-CM codes that fall into HCC code “buckets”
 - HCC codes have assigned risk adjustment coefficient values
 - HCC codes summated to determine the overall “Risk Adjustment Factor” (RAF) score

26

Cost Performance in the QPP

Performance based on risk adjusted encounters

- CMS HCC coding/RAF score model

Potential for Compliance Challenges:

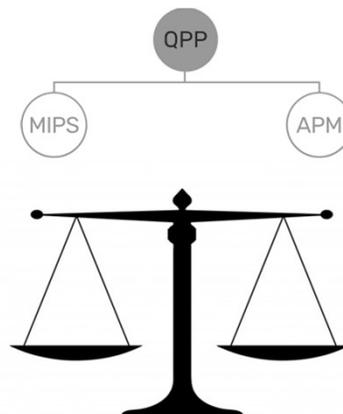

- Overreporting diagnoses not supported by:
 - The clinical scenario (e.g., sepsis reported when clinical criteria have not been met)
 - Clinician documentation
- Shifting diagnoses towards conditions with higher levels of risk adjustment
